Date of Birth: 14 March 1996

PROFILE

Product Manager with 3 years owning operations tooling at a first-time-building logistics start up.

EXPERIENCE

Product Manager — ShipLane (Series A freight visibility startup), Mumbai | Jan 2022 – Present

- Spent two days a month on the floor of three freight forwarders' operations teams, watching coordinators chase carrier updates on WhatsApp; this changed our Q3 roadmap from a dashboard to an exception inbox.
- Shipped 9 releases in two-week cycles; defined adoption targets before each launch and checked usage at 2 and 6 weeks.
- Killed the "auto-ETA email" feature after 6 weeks when only 4% of customers opened it, and moved the two engineers to document-checklist automation, which 70% of active accounts now use weekly without prompting.
- Wrote problem statements and acceptance criteria for every ticket; kept a refined backlog two to three sprints ahead with the engineering lead.
- Set up a weekly decision log and a monthly outcome review for the product and ops team where none existed; both are still used by the team.
- Mapped the bill-of-lading and delivery-order workflow with customer ops users, including where documents get stuck at the CFS.

Business Analyst — Coastline 3PL, Navi Mumbai | Jun 2019 – Dec 2021

- Gathered requirements directly from warehouse supervisors for a dock-scheduling tool I specified and rolled out.

EDUCATION

B.Tech, 2018
